## SMARTMIX™ VERTICAL TMR MIXER
- **What Sets Us Apart**  
  - A280 Single Auger Vertical TMR Mixer  
  - A380 Single Auger Vertical TMR Mixer  
  - A520 Twin Auger Vertical TMR Mixer  
  - A700 Twin Auger Vertical TMR Mixer  
  - A950 Triple Auger Vertical TMR Mixer  
  - A1230 Triple Auger Vertical TMR Mixer  
- **M600 Twin Auger Self-Propelled TMR Mixer**  
- **M800 Twin Auger Self-Propelled TMR Mixer**

## BALE PROCESSORS
- **What Sets Us Apart**  
  - Pro-Chop 150

## SELF-LOADING RALE CARRIER
- **What Sets Us Apart**  
  - StackPro 200 Square Bale Self-Loading Carrier and Stack  
  - TRB1000 Round Bale Self-Loading Carrier  
  - TRB1400 Round Bale Self-Loading Carrier  
  - TRB2000 Round Bale Self-Loading Carrier  
  - TSR3450 Square Bale Self-Loading Carrier

## WRAPTOR™ ALL-IN-ONE
- **What Sets Us Apart**  
- **WRAPTOR™**

## INLINE BALE WRAPPERS
- **What Sets Us Apart**  
  - NWS660  
  - IFX660 XTRACOR™  
  - Hybrid X XTRACOR™  
  - Evolution XTRACOR™

## SINGLE BALE WRAPPERS
- **What Sets Us Apart**  
  - RB200  
  - RB400  
  - RB500  
  - RB580  
  - RB600  
  - RB680  
  - 780SB

INNOVATION AT 
THE CORE OF 
OUR BUSINESS

1988
Anderson Group has been manufacturing agricultural equipment to facilitate hay storage since 1988.

2003
In February 2003, Anderson Group acquires a manufacturer of log loaders and individual wrappers in order to expand their product line.

2007
The WRAPTOR™ is launched. An all in one equipment for hauling and wrapping hay. This system lets one man and one tractor get the job done.

2013
Today, Anderson Group has over 120 employees. The factory is 67,000 sq ft. Anderson continues to add more products to its line-up to better meet the needs of farmers and global trends.

1995
In January 1995, the acquisition of a laser cutter improves quality and finish of our products.

2005
In 2005, Anderson Group develops a self-loading bale carrier for round bales. One man and one tractor can load and haul up to 20 bales at a time.

2009
In September 2009, Anderson Group introduces the Biobaler. It can harvest most biomass and compact it into a 4’ x 4’ bale.

2016
Anderson Group has nearly doubled the size of its plant, totaling 130,000 sq ft. State-of-the-art facilities Development in Technology confirms its status as a leader in the manufacturing of better-engineered agricultural equipment. The introduction of The PRO-CHOP 150 bale processor is introduced in the market, for both straw chopping and distributing forages. The perfect solution for litter and feeding.

2017
In an effort to constantly innovate, Anderson adds to its range of products the TMR vertical mixers SMARTMIX™.

ANDERSON WORLDWIDE

ONLY ANDERSON OFFERS YOU BETTER-THOUGHT-OUT AGRICULTURAL SOLUTIONS TO DO MORE AND MORE EASILY.

COMPLETE SOLUTIONS FOR SMARTER FARMS:

STORAGE
LOGISTIC
FEEDING
INNOVATIVE, RELIABLE AND HEAVY DUTY
The universal programmable weighing computer (standard on all pulled type models) allows the storage of data as well as... points.

- Compatible with DTM software.
- Dual LCD that allows a better user interface with clear operator messages.
- Possibility of programming 24 recipes, each with a maximum of 48 components and 48 distribution points.
- The change of ALL WEIGHT or NUMBER OF COWS can be placed before programs are placed by TOTAL or NUMBER OF COWS.
- The operator can edit the names of the components, distribution points and recipes all that from your computer and transfer them to the mixer.

SMART CONTROL
SMART CONTROL is a programmable wireless device for the management of the hydraulic and weighing functions of the TMR.

Optional on all Anderson pulled type models, this remote control allows to engage and display wirelessly the weighing system and control the hydraulic functions. During the loading phase the operator can use the SMART CONTROL on the loader to control in real time weight information: recipe/components/actual weight. During the feeding the SMART CONTROL can be used in the tractor. It is also possible to control wireless all hydraulic functions of the distribution phase: open/close discharge doors, activation of the belt. No more standing outside in the rain to setup your mix recipe, you can now do it from the comfort of your tractor cab or even your home! All scale and hydraulic functionality at the palm of your hand.

SMARTMIX™
SMARTMIX™ sets us apart by giving you the best of both worlds - strength and longevity. Our cutting blades are also reinforced to avoid breaking in frozen conditions or when processing frozen bales giving you the best of both worlds - strength and longevity. The 2 sweeping dispensers ensure a faster and more consistent discharge when mix is done and ready to be fed.

INDUSTRY'S FIRST HYdraulically Controlled TRUE-CUT™, RESTRICTION BLADE SYSTEM
Anderson introduces the first ever wireless remote controlled hydraulic restriction blades. The hydraulic function allows the operator to engage and disengage the blades during the mixing process reducing overall mixing time up to 22% and more importantly, preserving the integrity of the ingredients like forages and corn silage. When fully engaged (8 inches) it speeds up long fiber processing by up to 50% (compared with when it is partially engaged) once the fiber is processed in accordance with the requirements of the recipe, the blades can be disengaged eliminating risks of over processing the other ingredients. Ensures full control of your cows assimilation of its feed = increasing milk production by 5% with same cost of feed.

ADVANTAGES OF THE TRI-CUT™ AUGERS
Anderson’s unique triangular position of the blade around the auger allows processing quickly any type of bales (even frozen) and speed-up the flow of material. While being efficient on braking down bales, the spiral shaped augers 1, 2 or 3 depending on the model allow to pick up and elevate the material vertically, thus creating the “up and down” effect. The rotation of the auger gives the “front to back” effect in the cycle. This creates the best upward movement of the feed through the middle combined with the downward movement of the feed along the rolled tub wall creating the best mix every time.

BENEFITS OF A ROLLED TUB
We designed our tubs with rolled walls (not bent) giving them the following advantages:

1. Better material flow in a rolled and smooth tank avoiding restriction around the auger. Therefore the feed naturally moves and expansion effect is amplified.
2. The HP power required for a mix is reduced to a minimum. The flared and smooth shape makes for a homogeneous mixture faster.
3. The design of the walls being rolled naturally reinforces the tub giving it a longer life span.
4. Aware of the extensive use of mixing, Anderson's tub walls and floor are made of steel HEL (high elastic limit) reinforced absorbing the constraints of the loading, mixing and moving of the feed load.
5. Can be equipped with steel extensions as well as hay retention ring on all models.

SMARTMIX™
SMARTMIX™ is a feed management control system for your farm. It enables you to manage and control all feeding operations. Track history of loading and unloading including working time, acquire data about refusal for each group program components and recipes all that from your computer and transfer them to the mixer.

DG500 INDICATOR
DG500 INDICATOR is a food management control system for your farm. It enables you to manage and control all feeding operations. Track history of loading and unloading including working time, acquire data about refusal for each group program components and recipes all that from your computer and transfer them to the mixer.
SMARTMIX™

THE PERFECT MIX

Rolled sidewalls (not bent) for better flow of material, avoiding restriction around auger and naturally increase sturdiness.

Industry’s first hydraulic TRUE-CUT™ restrictor blades gives the operator the ability to disengage the restrictor blade during the mixing process without leaving the tractor seat, preventing all risks of overprocessing feed, especially forages.

Reinforced tub floor provides longevity of the tub and also to the weighing load cells by equalizing the weight uniformly.

SMART CONTROL remote system is a portable wireless device for the integrated management of the hydraulic and weighing functions of the TMR (offered as an option).

THE IMPORTANCE OF THE GRADE OF STEEL USED IN MANUFACTURING OUR MIXERS

All Anderson mixers are manufactured from high abrasion resistant steel plates, which gives them great resistance to wear even over the years. The floor of the mixer is made of AR400 and its side walls are made of steel AR235.

SMARTMIX™

THE PERFECT MIX

Tungsten carbide knives that sharpen automatically.

TRI-CUT™ auger with 2-position adjustable and reversible knives (10 standard) and 2 sweeping dispensers ensuring a 30% faster and more consistent discharge. The triangular position of the knives give flat edges to the auger, processing quickly bales and speeding up flow material around the auger.

The programmable weighing computer DG500 comes standard on all our pulled type models. It allows the storage and programming of data and distribution sequences.

Optional 2 speed gearbox available, allows to be used with smaller less powerful tractors.

Discharge options: side trap discharge, front conveyor, bi-directional conveyor, rear commodity door.

Extend tub wall longevity and capacity by reinforcing the complete structure with the steel capacity extensions (6", 12", 18") (A). Avoid rubber extension that crack and the replacement cost involved with them year after year. Also available, hay retention ring.
The Anderson A280 single auger mixers have been developed for farms where the footprint of the machines is an important factor. These mixers are compact and highly maneuverable. The rear axle has been integrated to offer overall a very low height and perfect maneuvering. These low tubs easily find their place on farms with low ceilings.

**FEATURES AND OPTIONS**

1. Capacity 282 cu ft to 367 cu ft
2. Reinforced tub floor provides longevity of the tub and also to the load cells by equalizing the weight uniformly.
3. TRI-CUT™, auger with 2-position adjustable and reversible knives (10 standard) and 2 sweeping dispensers ensuring a 30% faster and more consistent discharge.
4. Side trap discharge designed with a sloped floor. Optional magnet can be installed as well. Side trap can also be equip with inclined conveyor.
6. Industry’s first hydraulic TRUE-CUT™ restrictor blades allows the operator to engage and disengage during the cutting process preventing all risks of over-processing feed.
7. The DG500 indicator is a universal, programmable weighing indicator for recipes, dispensing and data storage. It guarantees an extremely precise weighing thanks to the protected load cells and strategically located under the tank. Compatible with the DTM suite.
8. 3-point scale system.

The Anderson pull type A520 twin auger mixer has the ability to mix the widest variety of ingredients. Process large amounts of hay, even complete square and round bales of silage. Available with several discharge options. What ever you ration are designed to increase milk production of dairy cows or minimize variation in feed for each group you feed, vertical mixer will help optimize the dry matter and nutrient intake of your herd.

**FEATURES AND OPTIONS**

1. Capacity 520 pi³ à 666 pi³.
2. Reinforced tub floor provides longevity of the tub and also to the load cells by equalizing the weight uniformly.
3. TRI-CUT™, auger with 2-position adjustable and reversible knives (10 standard) and 2 sweeping dispensers ensuring a 30% faster process preventing all risks of overprocessing feed.
4. SMART CONTROL remote control (optional) provides you full wireless control to: customize weighing system and recipe, hydraulics, speed of belt etc.
5. TRI-CUT™, auger with 2-position adjustable and reversible knives (10 standard) and 2 sweeping dispensers ensuring a 30% faster and more consistent discharge.

**SMARTMIX™**

**A700**

**TWIN AUGER VERTICAL TMR MIXER**

The pull type twin auger A700 mixer is designed for intensive daily use. These mixers are adaptable depending on the configuration of the operation and the type of farming. The solution for every size farm.

**FEATURES AND OPTIONS**

1. Capacity 695 pi³ à 897 pi³.
2. Reinforced tub floor provides longevity of the tub and also to the load cells by equalizing the weight uniformly.
3. TRI-CUT™, auger with 2-position adjustable and reversible knives (10 standard) and 2 sweeping dispensers ensuring a 30% faster and more consistent discharge.
5. Industry’s first hydraulic TRUE-CUT™ restrictor blades allows the operator to engage and disengage during the mixing process preventing all risks of overprocessing feed.

* Details and technical specifications of the metal, see pages 8 and 9.
Anderson knows it is with high quality raw materials that we manage to achieve nutritional goals and high production. The mixing rate should be adapted to avoid any risk of overheating and grinding that could lead to diminished efficiency of the TMR. The pull type A950 triple auger mixer becomes an ideal solution with their distribution conveyor ideal for fibrous rations. The cross conveyor ensures even and prompt distribution to the left or right regardless of the prepared ration.

**Features and Options**

2. Reinforced tub floor provides longevity of the tub and also to the load cells by equalizing the weight uniformly.
3. TRI-CUT™, auger with 2-position adjustable and reversible knives (10 standard) and 2 sweeping dispensers ensuring a 30% faster and more consistent discharge.
4. Discharge options: front conveyor, rear trap or front conveyor
6. Industry’s first hydraulic TRUE-CUT™ restrictor blades allows the operator to engage and disengage during the mixing process preventing all risks of overprocessing feed.
7. The DS500 indicator is a universal, programmable weighing indicator for recipes, dispensing and data storage. It guarantees an extremely precise weighing thanks to the protected load cells and strategically located under the tank. Compatible with the DTM suite.
8. 6-point scale system.
9. Rolled side walls (not bent) for better flow of material, avoiding restriction around auger and naturally increased sturdiness.
10. SMART CONTROL remote control (optional) provides you full wireless control to: customize weighing system and recipe, hydraulics, speed of belt etc.

**Details and technical specifications of the metal,** see pages 8 and 9.
Anderson’s self-propelled and self-loading M600 mixers have been developed to save time when feeding large herds. These models perform a number of functions including loading and mixing different ingredients and finally distributing the rations accurately using a built-in weighing system. The M600 is a machine powered by a Deutz 6 cylinder engine and automatically driven via hydrostatic traction by the two gear motors placed on the rear wheels.

**Features and Options**

1. **Capacity** 600 pi³
2. **Reinforced tub floor provides longevity of the tub and also to the load cells by equalizing the weight uniformly.
3. **TRI-CUT™**, auger with 2-position adjustable and reversible knives (10 standard) and 2 sweeping dispensers ensuring a 30% faster and more consistent discharge.
4. **Discharge options**: rear conveyor.
5. **Deutz 217 HP 6 cylinder engine tier IV final.
6. **TRUE-CUT™** restrictor blades allows the operator to engage and disengage during the mixing process preventing all risks of overprocessing feed.
7. **Milling head cutting width** 6’ 6” (2 m).
8. **4-point scale system.
9. **Rolled side walls (not bent)** for better flow of material, avoiding restriction around auger and naturally increased sturdiness.
10. **Easy access to the engine and important parts for maintenance.

**Specifications**

**SmartMix™ M600**

- **Capacity of the tub – Including 12” extension**: 600 pi³
- **Total height**: 10’ 5” (3 m)
- **Number of augers (10 adjustable and reversible knives/auger)**: 2
- **Engine**: Deutz 217 HP 6 cylinders
- **Discharge options**: Rear conveyor
- **Hydrostatic drive**: Standard
- **Touch screen in-cab controls**: Standard
- **TRUE-CUT™** restrictor blades: Standard

**SmartMix™ M800**

- **Capacity of the tub – Including 12” extension**: 822 pi³
- **Total height**: 9’ 7” (2.7 m)
- **Number of augers (10 adjustable and reversible knives/auger)**: 2
- **Engine**: Deutz 245 HP 6 cylinders
- **Discharge options**: Rear conveyor
- **Hydrostatic drive**: Standard
- **Touch screen in-cab controls**: Standard
- **TRUE-CUT™** restrictor blades: Standard

Thanks to the speed and ease of operating of the twin auger self-propelled M600, it is perfectly suited for large dairy or cattle farms who are looking for a high-precision, efficient method of feeding. Equipped with latest generation Deutz Tier IV final engines, these self-propelled mixers are known to have low fuel consumption.
QUICK AND EASY DISTRIBUTION
WHAT SETS US APART
PRO-CHOP 150

EVEN MORE CONTROL
New electric controls of the rear loading door were installed on this year’s model. These controls allow the user to operate the conveyor as well as to open and close the door. Useful when a bale is not placed properly or to remove the net or string from the bale at the beginning of the process, it can all be done directly next to the machine.

BETTER CUT
The rotor is equipped with 264 heavy duty knives that can shred round or square bales of silage, hay or straw. Even frozen bales will have no problem being processed. Its diameter ensures constant flow.

BETTER DISTRIBUTION
The chute makes the distribution in troughs near the machine very precise and comfortable. It allows spreading up to 60 feet on the right and 40 feet on the left. For bedding, livestock is cleaner and healthier and the straw is finely chopped to increase its absorbency to moisture. By improving the comfort of cows, the risks of mastitis and health problems are reduced. The speed and ease of making bedding also saves straw and time. Also it is easy to pretreat the straw for RTM mixers. Consumption is then increased and waste is reduced.

HIGH LOADING CAPACITY
The 5’ chamber is suitable for use with all bale sizes.
- Capacity of 2 bales (1 X 6’ round, 2 X 5’ round and square bales up to 4’X 4’X 8’) reducing the risk of overflow.
- Load the bales with the rear door using the camera.
- Possibility of having 2 bales at the same time. The loading door allows a bale to sit on the door while the other is getting processed inside.

UNMATCHED VISION
The inside camera allows the operator to see the bales on the conveyor, the rotor and the loading. The new rearview cameras offer a perfect view of the loading process.

SETTINGS WITHOUT TOOLS
4 possible settings: change settings without tools in less than 15 seconds.
1. NEW more aggressive rotor with 22 discs and 264 knives for more effective processing.
2. The top gate when engaged will be used to help chop down fiber more efficiently. On the other hand when disengaged it will allow material to go through without cutting it leaving it pretty much intact.
3. Counter knife setting is always used along with the top gate to chop down material.
4. The removable recutter screen is used ONLY when processing straw. The screen with its 2 inch holes, will prevent larger fiber of straw to go through and will be forced back into the knives’ path and be cut.
5. The comb is part of the rotor and allows the bales to be perfectly fed through the rotor. Prevents the bales to come in too quickly and creating plugging.
6. Showing the counter knife disengaged.
7. Showing the top gate disengaged.

BETTER EQUIPPED
The PRO-CHOP 150 is equipped with a clean out under the frame at the back of the machine, allowing to clean foreign bodies or other debris. Can also be opened for cleaning residual buildup without removing the fan or opening the machine.

NEW more agressive rotor with 22 discs and 264 knives for more effective processing.
The PRO-CHOP 150 is a bale feeder and chopper that provide an ideal bedding or feeding solution for bales of hay, straw, silage. The Anderson improved model is now the only model on the market able to process different material in different lengths: Haylage - full length down to 5”, Hay - full length down to 3”, Straw - full length down to 1”. Perfect for processing round and square bales.

**Features and Options**

1. NEW more aggressive rotor with 22 discs and 264 knives for more effective processing.
2. The top gate when engaged will be used to help chop down fiber more efficiently. On the other hand when disengaged it will allow material to go through without cutting it leaving it pretty much intact. Counter knife setting is always used along with the top gate to chop down finer material.
3. The removable netting screen is used ONLY when processing straw. The screen with its 2 inches wholes will prevent longer fiber of straw to go through and will be forced back into the knives’ path and be cut. Counter knive setting is always used along with the top gate to chop down finer material.
4. The comb is part of the rotor and allows the bales to be perfectly fed through the rotor. Prevents the bales to come in too quickly and creating blockages.
5. 68 inches Blower made with steel AR400 ensuring the best quality and resistance to wear. Side wall fan in steel AR400 also.
6. Large wheels for muddy terrain.

WORKING AS HARD AS YOU DO
DO MORE WITH ONE TRACTOR AND ONE OPERATOR!

EASY LOADING
The TSR3450 self-loading arm allows 19 square bales to be picked up and can easily be adjusted to fit different bale sizes. The round tubular self-loading arm of the TRB series is designed to quickly collect round bales of silage and dry hay while protecting the net. No tears or broken net or twine. The loading arm has been designed to be able to follow the path of the baler for fast, nonstop loading, saving field loading time and picking up an extra load of bales. The arm as well as the sides of the platform are adjustable to fit your type of bales. Power and maneuverability provide Anderson trailers with unmatched efficiency.

HIGH FLOTATION TIRES
High flotation tires reduce compaction while providing safe transport of wet or dry bales.

EFFORTLESS UNLOADING
The hydraulic unloading system is made by tilting the platform and accurately and gently deposits the bales on the ground. The bales are left on the ground linearly and perfectly positioned to facilitate their subsequent wrapping.

WHAT SETS US APART SELF-LOADING BALE CARRIERS

EFFECTIVE AND SPEED
These heavy-duty self-loading trailers are designed to pick up and transport wet or dry hay, allowing you to be faster and more efficient in the field. The hydraulic bale receiving platform makes it possible to position them perfectly on the tractor and to minimize the quantity transported. With its manufacturing profile, the operator maintains optimum visibility of its load even on rough terrain. Models available with or without brakes.

OPTIMAL PERFORMANCE
Accurate steering and a full load indicator allow you to continue working efficiently for many hours. The tandem axle provides stable and optimum machine performance. The Stackpro7200 allows 90 degree unloading (stacking) of square bales.

INFO USED FOR CALCULATION:
- Travel speed with empty load on carrying unit: 20 miles/h (32 km/h) - Travel speed with full load on carrying unit: 14 miles/h (22 km/h)
The Stackpro7200 is an innovative system that incorporates square bale collecting and stacking for farmers who are conscious about saving time in the logistics of their bales all year round. The Stackpro7200’s rugged design is built to handle almost all bale types and bale sizes. The Stackpro7200’s high speed and smooth transitions allows to easily carry and stack bales.

### FEATURES AND OPTIONS

1. Tandem axle makes for stable and optimal performance of the machine.
2. Designed with lubrication-free pivot system for moving parts, the Stackpro7200 is virtually maintenance free.
3. Two rear clamps support the complete weight of the load when lowering down the stack and retrieving bales.
4. Unique adjustable self-loading heavy duty clamp capable of handling bales up to 1100 kg (2400 lbs) without damaging twine.
5. Fully electronically control panel, weighs bales and total load.
6. High flotation tires.
7. Rugged frame and steel bed supporting wet and dry bales.
8. Hydraulic unloading and stacking system.

---

The TSR3450 is a self-loading bale carrier enabling you to pick up and carry square bales quickly and effectively. Completely remote controlled from the safety and comfort of cab of your tractor. The rugged frame and steel bed will support wet and dry bales. The adjustable bale clamp allows you to load different size bale sizes. The TSR3450 has no comparison.
HAUL MORE.
WRAP MORE.
Like inline wrappers, the WRAPTOR™ has a simple and fully automatic wrapping system. It can wrap 14 bales in less than 4 minutes with only one operator and one tractor!

When labor is hard to find or you need to do things quickly, this all-in-one system offers you the perfect solution.

- 4 tensioners
- Adjustable bale guide rollers
- Adjustable hoop speed with flow control valve
- Hydraulic bale compaction system
- Honda 13 HP Engine
- Remote control of the wrapping process

Both self loading carrier... and inline wrapper

The WRAPTOR™ includes two unique machines that are not designed to be sold separately. The self loading carrier collects and transports 14 bales (4 ft x 4 ft) at a time. Its loading arm allows it to follow the baler and collect the bales directly in their position by gently rotating the bales before picking them up and loading them. No wasting time zigzagging in the field to collect the bales. When the load is complete, the trailer is then attached to the wrapper without additional equipment and without having to leave the tractor seat. The pusher then allows the trailer to push the bales directly into the wrapper for a process without interruption. Also, the self-loading carrier attaching to the wrapper allows to transport it from one site to another. Only one tractor and one operator!
EFFICIENTLY TRANSPORT AND WRAP.

The high-performance WRAPTOR™ is the combination of a self-loading trailer and an in-line wrapper. When labor is hard to find or you need to do things quickly, this all-in-one system allows you to do the transportation and wrapping with only one operator and one tractor.

The WRAPTOR™ is the ultimate system for loading, transporting and wrapping. Designed for collecting wet or dry hay, it offers the fastest performance on the market. The trailer collects and transports 14 bales (4 ft × 4 ft.) at a time and attaches to the wrapper without additional equipment. The remote control offers the possibility to do everything from the seat of the tractor.

**WRAPTOR™**

**CARGO**

- Round bale diameter: Up to 5’ (1.5 m)
- Maximum speed with a load of 25,000 lbs: 30 km per hour
- Maximum speed with a load of 21,000 lbs: 45 km per hour

**SPECIFICATIONS**

- Tractor minimum HP requirements: 100 HP
- Traction tires: 29 x 12.5-15
- Rear tires: 11 L-15
- Bed shape: V shaped for round bales

**FEATURES AND OPTIONS**

1. Pick-up and transport faster with one operator.
2. Tilting tow bar for easy hook-up to the wrapper.
4. 4 stretchers replace rolls less often, wrap faster.
5. Adjustable self-loading arm tubular round-shaped designed for bale net protection.
7. Hydraulic jack leveling system. Insures the 2 first bales stay together until lowered down to the ground.

**BALE CARRIER WRAPTOR™**

- Tractor minimum HP requirements: 100 HP
- Round bale diameter: Up to 5’ (1.5 m)
- Square bale: N/A
- Tires: 500 / 45-22,5
- Maximum speed with a load of 25,000 lbs: 30 km per hour
- Maximum speed with a load of 21,000 lbs: 45 km per hour
- Camera: Standard

**SPECIFICATIONS**

- Bales transported per hour on a distance of 0.62 mile (1 km): 50
- Bales transported per hour on a distance of 1.24 mile (2 km): 30
- Bales transported per hour on a distance of 1.86 mile (3 km): 20
- Bales transported per hour on a distance of 2.48 miles (4 km): 23
- Bales transported per hour on a distance of 3.10 miles (5 km): 10

**BALES TRANSPORTED AND WRAPPED WITH ONE TRACTOR AND ONE OPERATOR**

**WRAPTOR™**

- Round bale diameter: Up to 5’ (1.5 m)
- Square bale: N/A
- Wrapping speed: Wrap 14 bales in less than 4 minutes*
- Final bale push-off system: With the trailer pusher
- Aluminium stretcher: 4 x 30” (750 mm)
- Leveling system: Hydraulic jack

**SPECIFICATIONS**

- Tractor tires: 29 x 12.5-15
- Rear tires: 11 L-15
- Bed shape: V shaped for round bales
- Bale guide rollers: Standard
- Mechanical and automatic wrapping system: Standard
- Adjustable hydraulic compaction system: Hydraulic

* Speed based on wrapping 4 bales.
STILL THE BEST YOU CAN GET.
XTRACTOR™: UNIQUE TO ANDERSON

XTRACTOR™, a patented and exclusive Anderson system, allows a quick and easy extraction of the last bale in less than a minute. A simple lever allows you to do everything. Only one step is needed to push the last bale. Anderson is the only manufacturer to offer you a fully automatic, effortless last bale pushing system.

MECHANICAL AND HYDRAULIC SYSTEM

The Anderson inline wrappers are reliable, easy to use and easy to adjust. They are also more reliable than systems that use electronics. Good weather or bad weather, they will never let you down. Highest reliability on the market.

LEVELING SYSTEM

With a hydraulic jack and hydraulic lift axle, they provide greater stability on soft or sloping terrain. Lifting the machine to the desired height is effortless, while moving through the field or even when connecting to a truck.

AUTOGUIDING

The autopilot is an optical sensor that allows the machine to automatically guide itself to the adjacent row, for optimization of the storage area. It gives you straight rows, with the same spacing between them.

FUEL TANK

The large capacity gas tank (25L, 6.6 gal) ensures you greater autonomy and fewer stops to refuel when you work and minutes count.

THE REMOTE

The remote control allows you to steer the wrapper start or stop the engine at the push of a button without leaving the tractor seat. It also makes it possible to control the wrapping process. The Anderson Inline wrappers are all manufactured standard self-propelled. No additional steps are required. When it comes time to move the machine, takes a few seconds and you are gone! Very easy to tow.

V-SHAPED OR FLAT DECK

Easily move from round to square bales by simply lifting a lever so that the V-shaped platform becomes flat. The quick-change system and the adjustable bale-guide rollers make it possible to go from round to square bales and even to wrapping double stacked bales in 2 minutes.

DAY AND EVENING

Work lights also offer increased visibility when wrapping early in the morning or late at night.

MORE COMPACT BALES

The hydraulically adjustable compacting system is the most important feature of an inline wrapper, enabling the operator to put the right amount of brake pressure on the machine in order to achieve perfect bale compaction in all terrain conditions. For the wrapping of 2 stacked bales, it is suggested to wrap dry hay instead of silage for a better conservation of the nutritional value.

KEEP NUTRIENTS IN!

Aluminum stretchers provide compact and waterproof bales by eliminating oxygen and increasing the quality of feed for greater nutritional value. Enhanced wrapping speed is achieved with 4 aluminum stretchers, allowing you to replace your plastic rolls less often. Increase the amount of film applied to the bales for a better seal in less time. Anderson is the only manufacturer able to offer a system of 4 independent stretchers installed at the factory ensuring better seal and better overlap of plastic layers. This will also help prevent puncture when it comes time to protect the corners of square bales.

ADDITIONAL OPTIONS

- Remote steering (available only for IFX660, standard on HYBRID X)
- 20 HP engine (only available on HYBRID X)

PLASTIC FILM WATCH

The plastic detector automatically stops the wrapping when the plastic runs out or tears, preventing the cycle from continuing without plastic and damaging the already started bale.

FLEX HOOP TECHNOLOGY

The HYBRID X XTRACTOR™ inline wrapper is designed with advanced Flex Hoop technology that allows you to wrap round or square bales with the same machine. The exclusive feature of the Flex Hoop technology ensures that the corners are wrapped precisely for square bales. All our models feature a larger hoop allowing you to wrap 6-foot bales. The bale pusher is faster than ever with its improved integrated cylinders.

WHAT SETS US APART

INLINE WRAPPERS

WHAT SETS US APART

INLINE WRAPPERS

Plastic Film Watch

The plastic detector automatically stops the wrapping when the plastic runs out or tears, preventing the cycle from continuing without plastic and damaging the already started bale.

Flex Hoop Technology

The HYBRID X XTRACTOR™ inline wrapper is designed with advanced Flex Hoop technology that allows you to wrap round or square bales with the same machine. Fuel Tank

The large capacity gas tank (25L, 6.6 gal) ensures you greater autonomy and fewer stops to refuel when you work and minutes count.
FEATURES AND OPTIONS

1. Remote control for starting, and stopping the unit remotely without leaving the tractor.
2. Work lights.
3. Large fuel tank (25 L, 6.6 GAL) Wrap 5 times more bales than with regular tank with less down time.
4. Film watch sensor automatically shuts down the wrapping cycle when the machine runs out of film or film breaks.
5. Bale guide rollers keep each bale centered on the roller bed when wrapping on a slope.
6. V-Shaped roller bed for round bales.

7. Hydraulic jack leveling system prevents the first bales from tumbling down and keeps them together for an easy row start.
8. New larger hoop to wrap 6’ bales.
9. The Honda engine offers high power, exceptional adaptability, quiet operation and fuel efficiency.

IFX660 XTRACTOR™
INLINE WRAPPER FOR ROUND BALES

Model shown: Farm King Combo

The IFX660 XTRACTOR™ model offers the versatility and power which will help you reach another level of performance. This model stems from the tested and proven NWS660 using the same manufacturing quality and precision. The new features of the IFX660 include larger hoop capabilities for wrapping 6’ round bales, new faster than ever pusher allowing you to wrap more bales per minute, increased speed and performance for high quality feed and to protect nutrient value of your silage bales.

1. XTRACTOR™ final bale push off system with a simple pull of a lever.
2. Hydraulic lifting axles allow to overcome obstacles when moving the machine.
3. Film watch sensor automatically shuts off the wrapping cycle when the machine runs out of film or film breaks.
4. 4 stretchers.
5. Autopilot the automatic pilot system allows the wrapper to precisely steer itself by following the adjacent bale row, maximizing the space needed to store your bales.
6. Remote control for starting, steering, and stopping the unit remotely without leaving the tractor.
7. Work lights.
8. Large fuel tank (25 L, 6.6 GAL), wrap 5 times more bales than with regular tank with less down time.
9. Bale guide rollers keep each bale centered on the roller bed when wrapping on a slope.
10. V-Shaped roller bed for round bales.
11. The Honda engine offers high power, exceptional adaptability, quiet operation and fuel efficiency.

NWS660
INLINE WRAPPER FOR ROUND BALES

Whether you are looking to wrap 50 or 5000 bales, this model has the features to handle wrapping round bales up to 6’ in diameter. No compromises have been made in manufacturing the NWS660 providing you the same quality wrapping speed and high-volume capacity of up to 180 bales per hour. As all other inline wrapper models at an economical price point.
## FEATURES AND OPTIONS

1. **XTRACTOR™** final bale push off system with a simple pull of a lever
2. 4 stretchers.
3. Easily switch from round to square bales by simply lifting a lever to go from a v-strapped bed to a flat bed.
4. Autopilot the automatic pilot system allows the wrapper to precisely steer itself by following the adjacent bale row, maximizing the space needed to store your bales.
5. Remote control for starting, steering, and stopping the unit remotely without leaving the tractor.
6. Large fuel tank (25 L, 6.6 GAL.) wrap 5 times more bales than with regular tank with less down time.
7. Film watch sensor automatically shuts down the wrapping cycle when the machine runs out of film or film breaks.
8. Bale guide rollers keep each bale centered on the roller bed when wrapping on a slope.
9. Hydraulic lifting axles allow to overcome obstacles when moving the machine.
10. 20 HP engine.

** Based on perfectly shaped 6’ bales.
A SIMPLE WAY TO GET PEACE OF MIND
OPTIMIZED WRAPPING

WRAP EFFORTLESSLY

We offer models that are fully automated and remotely controlled. No need to come down from the tractor to select or change the configuration, changes can be made with the remote directly from the tractor cab. It is thus possible to start the wrapping cycle, to pause it and to reactivate it at any time. It is also possible to start or stop the engine remotely, to select the number of rotations, ie the number of layers of plastic, to choose the rotation speed of the table, the number of wrapped bales per day and the total number of bales.

MORE OPTIONS

Possibility of adding a 1 position or 3 positions bale dumper. When you are wrapping on an incline terrain, the 3-position bale receiver allows you to unload the bale to the right, left or back, and let it roll gently to the ground. Also available on some models, the front and rear stabilizers provide perfect stationary wrapping on any surface.

The RB200 unloading system (3-point hitching machine) differs from the competition in the stability of its table. While other products will tend to twist and turn when unloading, the Anderson RB200 keeps the table hydraulically in a stable position for the bale to be unloaded in a straight line.

THE MOST EQUIPPED IN THE INDUSTRY

- Possibility to have a Honda 13 HP 18 amp engine offering greater freedom of operation.
- Bale guide rollers and seamless belts keep the bales centered on the machine, even when wrapping on slopes or rough terrain.
- Electronic bale counter allows you to select the number of turns and inform you when this number is reached. It also tracks the number of wrapped bales per day and per year.
- High-quality 30-inch aluminum stretchers increase the wrapping speed with the second stretcher by 40% (available on some models).
- We offer mechanical or hydraulic plastic cutting systems (depending on the model) that allows the operator to remain on the tractor to perform the maneuver.
WRAP SIMPLY AND EASILY

FEATURES AND OPTIONS

1. Knife cutting the plastic film after a new bale has been placed on the wrapper’s table.
2. Table with seamless belts allowing each type of bales to rotate and be wrapped evenly. The unloading system RB200 differs from the competition in the stability of its table. While other products on the market will tend to twist and turn when they unload, the Anderson RB200 keeps the table hydraulically in a stable position for the bale to be unloaded in a straight line.
3. The RB200 is connected to the tractor by means of a 3-point hitch system, powered by the tractor’s hydraulic pump motor.
4. World class aluminum stretcher.
5. Bale counter displaying the number of bale wrapped.
6. Bale guide rollers keep the bales centered on the wrapper even when on a slope.
7. Manual wrapping process via the hydraulic control levers of the tractor.

The RB200 3 point hitch single bale wrapper will be suited for small farm operations who want quality and dependability, intended to be used as a stationary equipment and connected to a tractor using a 3 point mounting system. Unlike other products on the market, the RB200 will not limit you to wrapping a limited number of bales per year, the Anderson manufacturing quality gives you peace of mind and insures an long-lasting unlimited use of the wrapper.

RB200
SINGLE BALE WRAPPER FOR ROUND BALES

1188.0x774.0

The Anderson RB200 is a single bale wrapper that is suitable for small farm operations who want quality and dependability. It is designed to be a stationary equipment and connected to a tractor using a 3 point mounting system. Unlike other products on the market, the RB200 will not limit you to wrapping a limited number of bales per year, the Anderson manufacturing quality gives you peace of mind and ensures long-lasting unlimited use of the wrapper.

Bale guide rollers | Standard

Bale counter | Standard

Details and technical specifications, see pages 50 et 51.

* Speed based on wrapping 4' bales.
FEATURES AND OPTIONS

1. Proven high quality aluminum stretcher.
2. Bale guide rollers keep the bales centered on the wrapper even when on a slope.
3. Electronic bale counter.
4. Turntable's belts allow for any type of bales to rotate be wrapped evenly regardless of their shape or condition.
5. Manual wrapping process via the control levers directly on the machine.

SINGLE BALE WRAPPER RB400

- Diameter of the round bale: Up to 5’ 6” (1.65 m)
- Length of the round bale: Up to 5’ (1.5 m)
- Square bale: N/A
- Wrapping speed: Up to 40 bales/h*
- Wrapping process: Manual
- Honda engine: N/A
- Aluminum stretcher: 1 × 30” (750 mm)
- Plastic cut and hold system: N/A

- Bale counter: Standard

SPECIFICATIONS

RB500

Details and technical specifications, see pages 50 et 51.
* Speed based on wrapping 4’ bales.
FEATURES AND OPTIONS

1. Remote control to control wrapping.
2. Designed to wrap stationary and automatically with a single operator.
3. Mechanical cut and hold system holds the film in place and cuts it automatically at the end of the cycle.
4. Honda engine offers high horsepower, exceptional adaptability, quiet operation, great fuel efficiency.
5. Proven high quality aluminum stretcher.
6. Bale guide rollers keep the bales centered on the wrapper even when on a slope.
8. Turntable’s belts allow for any type of bales to rotate be wrapped evenly regardless of their shape or condition.

SINGLE BALE WRAPPER RB580

- Diameter of the round bale: Up to 6' (0.85 m)
- Length of the round bale: Up to 5' (1.5 m)
- Square bale: N/A
- Wrapping speed: Up to 40 bales/h*
- Wrapping process: Manual
- Honda engine: N/A
- Aluminum stretcher: 1 x 30" (750 mm)
- Plastic cut and hold system: Mechanical
- Leveling system: N/A

SINGLE BALE WRAPPER RB600

- Diameter of the round bale: Up to 5' 6" (1.65 m)
- Length of the round bale: Up to 5' (1.5 m)
- Square bale: N/A
- Wrapping speed: Up to 40 bales/h*
- Wrapping process: Automatic
- Honda engine: 13 HP (18 A) (included with model RB600E)
- Aluminum stretcher: 1 x 30" (750 mm)
- Plastic cut and hold system: Mechanical
- Leveling system: N/A

Details and technical specifications, see pages 50 et 51.

* Speed based on wrapping 4' bales.
**FEATURES AND OPTIONS**

1. Front and rear stabilizer keep the wrapper level and stable.
2. 3 position bale dumper deposits bales onto the ground in 3 different positions including on either end.
3. Since the machine is fully automated and remotely controlled, no need to go down from the tractor to select or change the configuration; Changes can be made with the remote from the tractor cab.
4. Electronic bale counter.
5. Designed to wrap stationary with a single operator.
6. Increase wrapping speed by 40% with the optional second stretcher.
7. Hydraulic plastic cut and hold system.

### RB680

- **Diameter of the round bale**: Up to 6' (1.8 m)
- **Length of the round bale**: Up to 5' (1.5 m)
- **Square bale**: N/A
- **Wrapping speed**: Up to 65 bales/h* 
- **Wrapping process**: Automatic
- **Honda engine**: 13 HP (18 A)
- **Aluminum stretcher**: 1 × 30” (750 mm) or 2 × 30” (optional)
- **Plastic cut and hold system**: Hydraulic
- **Leveling system**: Front and rear stabilizers

### SPECIFICATIONS

- **Bale guide rollers**: Standard
- **Bale counter**: Standard

*Speed based on wrapping 4’ bales.

### 780SB

- **Diameter of the round bale**: Up to 6' (1.8 m)
- **Length of the round bale**: Up to 5' (1.5 m)
- **Square bale**: 3’ × 3’ up to 6’
- **Wrapping speed**: Up to 65 bales/h* 
- **Wrapping process**: Automatic
- **Honda engine**: 13 HP (18 A)
- **Aluminum stretcher**: 1 × 30” (750 mm) or 2 × 30” (optional)
- **Plastic cut and hold system**: Hydraulic
- **Leveling system**: Front and rear stabilizers

### SPECIFICATIONS

- **Bale guide rollers**: Standard
- **Bale counter**: Standard

*Speed based on wrapping 4’ bales.

### OPTIONS

- Remote control controls the complete wrapping process from your tractor seat.
- Hybrid wrapper for both square and round bales.
- 40% faster with 2 stretchers.
- Hydraulic cut and hold system.
- Remote control controls the complete wrapping process from your tractor seat.
- Hybrid wrapper for both square and round bales.
- 40% faster with 2 stretchers.
- Hydraulic cut and hold system.
- Remote control controls the complete wrapping process from your tractor seat.
- Hybrid wrapper for both square and round bales.
- 40% faster with 2 stretchers.
- Hydraulic cut and hold system.
ACCESSORIES

BALE GRABBERS

MODEL 4000
For round bales up to 60” (1.5 m) diameter.
Include the following features:
- Minimum opening: 33.5” (86 cm)
- Maximum opening: 68” (173 cm)
- 2 cylinder
- Frame dimension: 66.75” (167 cm)

MODEL 5000
For round bales up to 63” (1.67 m) diameter.
Include the following features:
- Minimum opening: 33.5” (86 cm)
- Maximum opening: 84” (213 cm)
- 1 cylinder
- Frame dimension: 65” (165 cm)

MODEL 6000
For round and square bales up to 84” (2.1 m) diameter.
Include the following features:
- Minimum opening: 19” (48 cm)
- Maximum opening: 90” (229 cm)
- 2 cylinder
- Frame dimension: 66.75” (167 cm)

Anderson bale grapples are available in several models to meet the needs of your farm. They are operated gently for wrapped bales or with a net.

Anderson bale spears are a simple and sturdy tool for handling square or round bales.

Bale spear = 1 spear (round bale)
Bale spear = 2 spears (round and square bale)
Protector shield for spears.
Quick attach available.
