

PROCEDURE REF# A-IND-031

## Procedure when turning ON the computer

For the remote control to work, it must communicate with the computer's receiver. To make it works properly, proceed as follow:

1. Turn on the computer by pulling the emergency stop button.

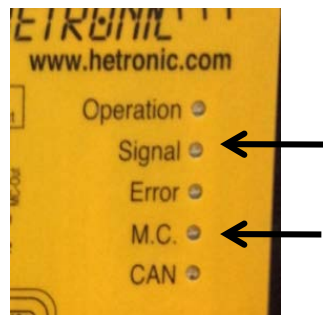

2. Ensure that the remote control key is in place.

3. Turn on the remote control using its start button (hold for at least 2 seconds).

4. Verify that “Signal” and “M.C.” LED are activated on the receiver.

\*If the remote turns on and you don't have access to the menu, the remote and the receiver are not communicating. Consult the procedure [A-IND-041](#) in order to clean up the remote key as well as reset this one in needed.
